## **Echelon Playback Faders**

Echelon consoles with serial numbers E99574 have been fitted with a new type of playback fader. The new fader is much smoother in operation and has more of a high quality feel.

The new fader is different to the old one in the following regards:

- It has a smoother action
- It is physically stronger
- It has a wider shaft
- It is not pin compatible with the previous fader type

Both fader types are manufactured by Alps Japan.

Because of the pin connections and the wider shaft it will be important to obtain the console serial number when supplying replacement faders and/or fader knobs. Playback PCB "ECHPBK2.PCB" and later are compatible with both types of fader.

All HOG1000/500 consoles have been fitted with the new fader type.
